

# Automatic Rotary Liquid Filling Machine

This high-speed automatic rotary filling machine is designed for precise dispensing of liquids or viscous products into containers. It features a stainless steel construction, adjustable filling nozzles, and a programmable logic controller (PLC) for automated operation.

## Overview

### High-Speed Rotary Filling Solution

This automatic rotary liquid filling machine is engineered for precise dispensing of liquid and viscous products into containers. Built with high-grade stainless steel, it ensures hygiene and long-term durability in demanding production environments. The system integrates a programmable logic controller (PLC) for seamless automation and features adjustable nozzles to accommodate various container sizes, effectively minimizing waste and maximizing production efficiency.

## Technical Specifications

### Industry Compatibility

Pharmaceutical • Cosmetic • Food Industry

### Construction Material

Stainless Steel

### Control System

Programmable Logic Controller (PLC)

### Filling Capabilities

Liquid Products, Viscous Products

## Performance Metrics

### Operational Efficiency

**1 PLC**

Automated Operation

**100 %**

Filling Accuracy
