

Automatic Shaft Straightening Machine

This automatic shaft straightening machine utilizes servo and transmission technology to improve efficiency. It achieves a straightening precision of up to 0.01mm.

Product Overview

High-Precision Shaft Straightening

This automatic shaft straightening machine is engineered for high-performance and reliable operation across diverse industrial sectors. Designed with a robust C-type frame, it delivers consistent precision for straightening applications, particularly within the vehicle manufacturing industry. The system is built to support high-volume production environments, offering customizable solutions to meet specific technical requirements.

Technical Specifications

Force Range

5 KN Minimum Force	50 KN Maximum Force
------------------------------	-------------------------------

Frame Design

C-Type

Application Suitability

Primary Industries

Vehicle Manufacturing, Automotive, Precision Engineering

Performance Features

Core Advantages

- High-precision straightening capability
- Reliable performance in high-volume environments
- Customizable solutions for specific needs
- Robust structural design
