

Automatic Slack Adjuster for Truck Brake Systems

Automatic slack adjuster designed for heavy-duty vehicle braking systems. This component ensures optimal brake performance by automatically adjusting the brake shoe clearance, compensating for wear and maintaining consistent braking force.

Product Overview

High-Performance Automatic Slack Adjuster

This automatic slack adjuster is engineered specifically for heavy-duty vehicle braking systems to ensure consistent and safe braking performance. By continuously monitoring and compensating for brake shoe wear, it maintains optimal clearance levels automatically, reducing the need for manual maintenance. Its robust, splined construction ensures a secure fit on the brake camshaft, providing reliable operation even under the most demanding driving conditions.

Technical Specifications

Key Features

- Automatic wear compensation
- Maintains consistent braking force
- Splined camshaft connection
- Robust heavy-duty construction

Durability Profile

High-Reliability • Heavy-Duty Grade

Application

Heavy-Duty, Braking Systems, Rear Axle
