Overview

Advanced Automatic Sliding Door System

This automatic sliding door operator is engineered for double glass doors, utilizing high-precision German technology to ensure smooth and reliable performance. Designed for commercial environments such as office buildings, hospitals, and retail centers, it features intelligent microcomputer control that accurately detects door size and weight. The system offers a robust, self-locking mechanism and ultra-low noise operation, providing a secure and efficient entry solution.

Technical Specifications

Max Door Weight	150 KG
Failure-Free Service Life	2000000 cycles

Features

Core Functionalities

- Self-locking function
- Ultra-low noise power unit
- Digital display parameter window
- Full-function remote control
- Automatic door weight and size detection

Control Technology	Microcomputer-based with German technology
--------------------	--

Compliance & Certification

Certifications	ISO9001, CE
----------------	-------------

Applications

Best Suited For

Office Buildings • Storefronts • Banks • Restaurants • Hotels • Shopping Centers • Hospitals
