

Automatic Slot Die Coating Head

The automatic control tuning die head accurately detects data feedback from the product. It rapidly controls product precision and improves quality to save raw material and maximize production efficiency.

Product Overview

Precision Slot Die Coating System

This advanced automatic slot die coating head is engineered for high-precision thin film and coating applications, ensuring exceptional uniformity across substrates. Designed for seamless integration into automated production lines, the system enables rigorous control over material deposition, thickness, and width. With variants suitable for both ambient and heated industrial processes, it provides a versatile and reliable solution for circuit boards, paper, fabrics, and plastics manufacturing.

Technical Specifications

Operating Variants

- Type 1: Ambient temperature coating (Room temperature)
- Type 2: Heated coating (Designed for high-temperature material application)

Suitable Substrates

Circuit boards, Paper, Fabrics, Plastics

Service and Support

Warranty

One-year free replacement for spare parts under correct operating conditions

Payment Terms

T/T, L/C, Negotiable
