

Automatic Soft Ceramic Tile Production Line

This equipment produces various soft ceramic tiles using a continuous production process. It offers increased efficiency compared to traditional methods and can be customized to meet specific requirements.

Product Overview

High-Efficiency Soft Ceramic Tile Production

This automatic production line is engineered for the continuous manufacturing of soft ceramic tiles, offering a significant efficiency boost over traditional batch processes. The system is highly customizable, allowing for integrated splitting, rewinding, cutting, and automatic packaging in a single streamlined workflow. Designed for industrial-scale operations, it provides consistent quality and high output for various tile specifications and shapes.

Production Metrics

Key Performance Metrics

150 kW

Power Requirement

2200 m²/24h

Daily Capacity

8 people/shift

Max Workforce

Technical Specifications

Facility Flow Process

- Stir system
- Stone-like/Multi-color paint coating
- Three-dimensional drying system
- Rewinding system
- Cutting dedicated device

Key Materials Used

Natural color sand • High-molecular polymer • Fiber resistance • Advanced composite material

Line Length Options

47m, 70m, 80m
