

Automatic Straightening Machine

100KN-800KN

This automatic straightening machine improves efficiency through servo and transmission technology. It achieves high correcting precision, up to 0.01mm, using an advanced expert intelligence control system, visual technology, and robotics.

Overview

High-Precision Straightening Solution

This automatic straightening machine is engineered for high-performance and reliable operation across diverse industrial applications. Designed for seamless integration into automated production lines, the system provides precise correction capabilities to meet rigorous quality standards. With a flexible force range, it offers a robust solution for manufacturers requiring consistent and efficient straightening results.

Technical Specifications

Force Range

100 KN

Minimum Force

800 KN

Maximum Force

Automation Level

Automatic • Factory Direct Integration

Model

JEM40

Key Features

Key Attributes

- High-precision straightening mechanism
- Integrated safety cage
- User-friendly control panel with display
- Robust construction for industrial environments
