Product Overview

Automated Straw Application Solution

The TG-1 straw applicator is an advanced automated system designed to enhance the packaging quality and consumer convenience of beverage products. By integrating seamlessly into existing production lines, it automates the entire process of conveying, cutting, gluing, and applying straws to various containers. This machine is engineered for stability and precision, meeting international technical standards for aseptic and high-volume packaging environments.

Technical Capabilities

Automated Processes

- Product conveying
- Straw conveying
- Straw cutting
- Product gluing
- Straw sticking

Control System

PLC automatic control system

Compatibility

Compatible Containers

Paper cartons, Plastic cups, Plastic bottles

Design & Construction

Key Design Features

Modular design • Intuitive control panel • Safety emergency stops • Protective guards

Construction Material

Stainless steel
