

Automatic Submerged Arc Welding Machine

This automatic submerged arc welding machine is designed for heavy-duty industrial use. It provides a stable welding process with adjustable parameters, making it suitable for automated welding in manufacturing and construction.

Overview

High-Performance Submerged Arc Welding

The MZ series automatic submerged arc welding machine is engineered for heavy-duty industrial applications, offering robust construction and reliable operation. It provides precise arc control to ensure consistent welding quality and high efficiency across a variety of materials. With adjustable parameters for optimal results, this machine is an ideal solution for automated welding processes in both manufacturing and construction environments.

Technical Specifications

Rated Current

500 A

Rated Current

Model Series

MZ-1000

Features

Key Features

- Automatic submerged arc welding process
- Robust industrial construction
- Precise arc control
- Adjustable welding parameters
- Consistent weld quality

Applications

Industry Suitability

Manufacturing, Construction, Heavy-duty Industrial
