

Automatic Transmission Clutch Assembly

This automatic transmission clutch assembly has a multi-disc design for efficient power transfer. Its external components are constructed from durable metal alloys for longevity and resistance to wear under high-stress conditions.

Product Overview

High-Performance Automatic Transmission Clutch Assembly

This automatic transmission clutch assembly is engineered for efficient power transfer and reliable performance. Featuring a robust multi-disc design, it utilizes high-quality friction materials and grooved surfaces to ensure optimal engagement. Constructed from durable metal alloys, the assembly is built to withstand high-stress conditions, providing smooth and consistent shifting for automatic transmission systems.

Technical Specifications

Design Type	Multi-disc
Compatibility	Automatic Transmissions
Material	Durable Metal Alloy, High-Friction Material

Key Features

Performance Highlights

90 series

Model Series/Designator

Construction Benefits

- Integrated mounting points for secure installation
- Central hub for direct transmission shaft connection
- Grooved plate surface for optimal engagement
- Wear-resistant alloy housing
