

# Automatic Vegetable Oil Filling Machine

The automatic vegetable oil filling machine is designed for precise filling of vegetable oils into bottles. It utilizes a multi-head filling system with adjustable nozzles, PLC control, and a conveyor system for continuous operation.

## Overview

### High-Efficiency Oil Filling Solution

This automatic vegetable oil filling machine is engineered for precise and efficient liquid handling in production environments. Featuring a robust stainless steel construction, it ensures hygiene and durability for long-term industrial use. The system integrates advanced automated controls and conveyor technology to streamline filling operations for small to large-scale production lines.

## Technical Specifications

Filling System Type	Multi-head filling system
Control Interface	Programmable Logic Controller (PLC)
Accuracy Mechanism	Volumetric, Gravimetric
Material	Stainless Steel

## Features & Safety

### Safety Features

- Emergency stop buttons
- Safety interlocks

### Automation Capabilities

Adjustable Nozzles • Continuous Conveyor System • Automated Operation

## Application

Production Suitability	Small to large-scale production lines
