

Automatic Water Pressure Pump

This automatic pump is designed for applications requiring consistent water pressure. It features a pressure tank to maintain water pressure and reduce pump cycling.

Product Overview

Deep Well Jet Pump System

The AUTOJETDP series deep well jet pump is a high-performance surface pump solution designed for efficient water delivery. It utilizes a dual-pump configuration, combining an ejector pump and a centrifugal pump in series to handle deep well requirements. Equipped with an integrated tank-auto system, this unit offers enhanced convenience by maintaining consistent water pressure and reducing pump cycling.

Technical Specifications

Pump Configuration	Two-stage series (Ejector + Centrifugal)
Well Size Requirement	3 inch
Suitable Fluids	Clean Water, Non-aggressive Chemical Fluids

System Components

Included System Components

- Pressure Tank
- Pressure Gauge
- Pressure Switch
- Foot Valve

Installation Requirements

Installation Best Practices

- Install foot valve with filter on suction end
- Ensure installation in a covered, weather-protected area

Application

Primary Applications

Domestic Water Supply • Irrigation • Pressure Boosting
