Overview

Reliable Water Pressure Management

The Automatic Water Pressure System is a self-priming peripheral pump solution designed to maintain consistent water pressure in residential and light commercial settings. Featuring a durable stainless steel pump body and an integrated 19L pressure tank, this system effectively reduces pump cycling, which helps extend the operational lifespan of the unit. It includes automatic start/stop functionality via a pressure switch and real-time monitoring through an attached pressure gauge, making it an ideal choice for reliable water supply in homes, gardens, and irrigation systems.

Technical Specifications

Tank Capacity	19 L
Pump Type	Self-priming peripheral pump
Body Material	Stainless Steel

Key Features

Included Components

- Pressure switch for automatic operation
- Pressure gauge for monitoring
- 19L pressure tank
- Flexible hose connection

Suitable Applications	Residential, Light Commercial, Garden Irrigation, Water Boosting
