

Automatic Water Pump for Clean Liquid Transfer

This automatic water pump is designed for pumping clean liquids. It is suitable for tank filling, domestic water supply, water transfer, pressure boosting, and irrigation.

Overview

Reliable Automatic Water Transfer

This automatic water pump is engineered for the efficient transfer of clean, non-corrosive liquids, making it an ideal solution for domestic water supply and pressure boosting. Built with high-quality components like 100% copper wiring and cold-rolled silicon steel, it ensures durability and consistent performance. Its automated operation is perfect for applications ranging from tank filling to garden irrigation.

Technical Specifications

Operating Temperatures

35 °C Max Liquid Temp	40 °C Max Ambient Temp
---------------------------------	----------------------------------

Max Suction Lift	8 m
Max Working Pressure	6 bar

Key Features

Construction Materials

- 100% Copper wire
- Cold-rolled silicon steel sheet
- Demagnetized stainless steel nuts
- Anti-rust treated castings

Manufacturing Highlights	Automatic wiring, High-speed punching, Electrophoresis treatment
---------------------------------	--

Applications & Compliance

Primary Applications

- Tank filling
- Domestic water supply
- Water transfer
- Pressure boosting
- Irrigation

Certifications

CE • RoHS • ISO9001 • ISO14001 • OHSAS18001

Logistics

Packaging

Color box and Carton
