

Automatic Water Pump Pressure Controller

This automatic pump pressure controller maintains consistent water pressure in domestic water systems. It features adjustable pressure settings and automatic pump start/stop functionality based on water demand.

Overview

Intelligent Water Pressure Management

This automatic water pump pressure controller is engineered to maintain consistent water flow in domestic systems. By automating the start and stop functions based on real-time demand, it ensures efficient operation while protecting the pump motor from dry running and pressure fluctuations. Built with durable materials, it offers a reliable solution for long-term installation and system stability.

Technical Specifications

Maximum Pressure

10 bar

Pressure Rating

Key Features

- Automatic start and stop functionality
- Adjustable pressure settings
- Integrated monitoring gauge
- Motor protection

Compliance & Application

Durability

High-Grade Construction • Long-Lasting Performance

Suitable Applications

Domestic Water Systems, Water Pump Automation
