

Automatic Water Pump Pressure Controller

This automatic pump control unit is designed for domestic water systems. It integrates functions such as water shortage protection, automatic restart after power failure, and pressure regulation to maintain consistent water supply.

Product Overview

Reliable Water Pressure Control

This automatic pump control unit is designed for efficient water management in domestic and small-scale pumping systems. It ensures a consistent and stable water supply by providing integrated pressure regulation and automatic restart capabilities after power interruptions. The system also includes essential water shortage protection to safeguard the pump, making it a robust and reliable choice for boosting residential water pressure.

Technical Specifications

Protection Rating

IP65

Rated Voltage

230 V

Frequency

50/60Hz

Max. Current

10 A

Max. Power

1.1 kW

Max. Pressure

10 BAR

Performance Features

Core Functionalities

- Water shortage protection
- Automatic restart after power failure
- Constant pressure regulation
- Easy installation

Model Identification

SKD-1AD
