

Automatic Water Pump Pressure Controller

This electronic device automatically controls water pump pressure. It maintains constant pressure in water supply systems by starting and stopping the pump based on water demand.

Overview

Electronic Water Pump Controller

This electronic pressure control device is engineered for the automatic management of water pump systems. By intelligently monitoring water demand, it maintains constant system pressure and automatically starts or stops the pump as needed. It includes essential safety features like dry-run protection and a built-in pressure gauge for real-time system monitoring, making it an ideal solution for residential and light commercial water supply applications.

Technical Specifications

Suitable Applications

Residential • Light Commercial

Model Identifier	DSK-2
Key Features	Automatic Control, Dry-run Protection, Adjustable Pressure, Built-in Gauge
