

Automatic Water Pump Pressure Controller

This automatic pressure control device is designed for water pumps. It integrates pressure and flow sensors to automatically start and stop the pump based on water demand, while also preventing damage in the absence of water.

Product Overview

About This Automatic Water Pump Controller

This high-quality automatic pressure control device is engineered for seamless integration with water pump systems. By utilizing advanced pressure and flow sensors, it ensures efficient automatic operation based on real-time water demand. The integrated dry-run protection feature proactively prevents damage to the pump system during water supply interruptions, making it a reliable solution for residential boosting and irrigation needs.

Technical Features

Common Applications

- Domestic water systems
- Shower pressure boosting
- Tap pressure boosting
- Garden irrigation

Certification

CE

Integrated Safety

Dry-run protection, Automatic start/stop, Flow sensing
