

Automatic Water Softener Valve, 50 m3/h

This automatic softener valve is designed for high-flow water softening systems and features an electronic control panel for programming and monitoring. Suitable for industrial and commercial applications, it provides efficient and reliable water softening at a flow rate of 50m3/h.

Overview

High-Capacity Automatic Softener Valve

This 50 m³/h automatic water softener valve is engineered for high-flow industrial and commercial water treatment systems. Featuring a robust piston structure for reliable operation, it ensures consistent water quality while minimizing manual intervention. The unit is compatible with booster pumps for low-pressure environments and offers flexible configuration options to suit diverse softening requirements.

Performance Specifications

Flow Rate

50 m³/h

Max Flow Rate

Model

F112

Control Options

Time Clock, Meter Type

Technical Features

Key Features

- Piston-based structure for reliable operation
- Booster pump compatible
- Corrosion-resistant construction
- Programmable regeneration cycles

Applications

Recommended Applications

- Boiler water softening devices
- Ion exchange systems
- Large-scale industrial water treatment
- Commercial water softening

Certifications

Compliance

CE • ROHS
