Product Overview

Automatic Water Softener Valve

This automatic softener valve is an electronic control solution designed for residential and light commercial water softening applications. It features a user-friendly interface with a digital display for easy programming and monitoring of the softening process. The valve automates the regeneration cycle based on either time or volume to ensure efficient and reliable water softening performance.

Control & Interface

Display	LED colorful screen
Regeneration Modes	Time clock type, Meter type

Connectivity

External Connections

- Signal output connector (controls water pump or solenoid valve)
- Remote handling connector (PLC compatible)
- Interlock connector (parallel or series system configuration)

Operational Features

Cycle Control

- Service
- Backwash
- Brine draw
- Slow rinse
- Fast rinse

Safety Features	Yes
