

Automatic Width Change Light Keel Roll Forming Machine

This automatic roll forming machine efficiently produces light steel keels with variable widths. It features precision rollers and an automated width adjustment system for consistent output.

Overview

High-Efficiency Light Keel Production

This automatic width-change roll forming machine is engineered for the precise and efficient production of various light steel keel profiles. Featuring advanced automated width adjustment, it allows manufacturers to switch seamlessly between different product specifications, reducing downtime and enhancing flexibility. The robust construction ensures long-term stability and consistent output quality, making it an ideal solution for high-volume manufacturing of construction framing components.

Capabilities

Key Features

- Automatic width adjustment
- Precision roller forming
- Continuous operation drive mechanism
- User-friendly control interface

Supported Profiles

Angle, Omega, Stud, Track, 38 Main Furring, 50 Furring

Technical Specifications

Material

Light steel
