

Automatic Wire Mesh Welding Line

This automatic wire mesh welding line produces reinforcing mesh and steel gratings. It features automatic wire feeding and precise welding control for high-volume production.

Product Overview

Industrial Wire Mesh Production

The GWCZ2800JZ and GWCP2800JZ automatic wire mesh welding line is an industrial-grade system engineered for high-volume manufacturing. It delivers consistent weld quality and dimensional accuracy through automated wire feeding and precise control systems. Designed for durability in demanding environments, this machine minimizes material waste while maximizing productivity for construction and fencing applications.

Technical Features

Automation Capabilities

- Automatic wire feeding system
- Programmable logic controller (PLC) for monitoring
- Advanced welding parameter adjustment
- Precise welding current and voltage control

Safety Compliance

Protective Guarding, Emergency Stop Mechanism

Performance

Key Performance Metrics

2800 mm

Max Welding Width
