

# Automatic Wire Straightening and Cutting Machine

This machine improves efficiency using servo and transmission technology. It achieves high precision, with straightening precision reaching 0.01mm.

## Overview

### High-Precision Automation Solution

This automatic wire straightening and cutting machine is designed to deliver high-performance and reliable processing for various industrial applications. By leveraging advanced technical capabilities, it ensures high-precision results for metal wire preparation. This equipment is engineered to enhance efficiency in metal forming processes, meeting the rigorous demands of modern manufacturing environments.

## Technical Specifications

### Force Range

**50 KN**

Minimum Force

**800 KN**

Maximum Force

### Model Designation

JEM30

## Capabilities

### Core Functions

- Automatic wire straightening
- Automatic wire cutting
- High-precision metal forming

### Suitable Industries

Metal Processing, Industrial Manufacturing, Wire Preparation
