

Automatic Wire Stripping Machine

This automatic wire stripping machine precisely cuts and strips various wire types. Its programmable control system allows for accurate length and depth adjustments, ensuring consistent performance.

Overview

Precision Wire Processing

The ZDBX-11 is an automatic wire stripping machine engineered for high-precision cutting and stripping applications. Designed for industrial efficiency, it utilizes a programmable control system that allows for exact length and depth adjustments to ensure consistent output. Its robust construction makes it an ideal solution for high-volume production environments requiring reliable wire preparation.

Technical Specifications

Key Features

- Programmable control system
- Multi-roller wire feed mechanism
- Adjustable cutting blades
- Versatile material compatibility

Processing Capabilities

Automatic Cutting, Automatic Stripping, Precision Adjustment

Safety and Design

Safety Components

Emergency Stop • Protective Cover
