

Automobile Air Conditioning Condenser

This condenser is designed for efficient heat exchange in automotive air conditioning systems. It features a parallel flow design with aluminum tubes and fins for enhanced cooling performance.

Product Overview

High-Performance Automotive Condenser

This automotive air conditioning condenser is precision-engineered to deliver efficient heat exchange and reliable cooling performance. Designed with a durable aluminum alloy construction, it provides excellent corrosion resistance and longevity under demanding operating conditions. Its parallel flow configuration ensures optimal refrigerant condensation, contributing to a comfortable cabin environment and the overall efficiency of the vehicle's climate control system.

Technical Specifications

Core Dimensions

726 mm

Length

385 mm

Width

16 mm

Thickness

Vehicle Compatibility

Model	Reference Number
Camry	88-75036
OEM Reference	3995

Key Features

Construction	Aluminum Alloy, Parallel Flow Design, Corrosion Resistant
