

Automobile Climate Control Unit with Digital Display

Automobile climate control unit featuring controls for front and rear defrost, automatic climate control and air recirculation. It is designed for integration into a car's dashboard and includes a temperature adjustment knob and a digital display screen.

Product Overview

Integrated Climate Control Solution

This automobile climate control unit is designed for seamless dashboard integration, offering precise thermal management for vehicle interiors. It features an intuitive interface with a digital display, allowing drivers to easily monitor and adjust settings. The unit supports essential functions including automatic climate control, fan speed regulation, and air recirculation to ensure optimal passenger comfort in various driving conditions.

Control Interface

Available Controls

- Front Defrost
- Rear Defrost
