Product Overview

Automobile Engine Iron Piston

This high-performance iron piston is engineered for durability and reliability in demanding automobile engine environments. It features precision-machined ring grooves for optimal sealing and a robust design capable of withstanding high combustion temperatures and pressures. Designed for efficient power delivery, this component provides a dependable solution for automotive engine maintenance and performance upgrades.

Technical Specifications

Material	Iron
Weight	489 g
Design Features	Precision-engineered ring grooves, Wrist pin bore, Machined crown
