

Automobile Engine Piston Ring Set

Piston rings are essential components for sealing the combustion chamber and maintaining oil control. These rings are constructed from durable materials to withstand high temperatures and pressures within the engine.

Product Overview

High-Performance Engine Piston Rings

This piston ring set is precision-engineered to ensure a tight seal between the piston and cylinder wall, which is essential for maintaining optimal combustion chamber pressure. Designed for durability, these rings effectively manage oil control and facilitate heat transfer from the piston to the cylinder wall. These components are built to withstand the high temperatures and pressures of demanding engine environments, helping to maximize power output and reduce oil consumption.

Technical Specifications

Included Components

- Compression rings
- Oil control rings

Key Performance Benefits

Enhanced wear resistance, Improved heat dissipation, Reduced oil consumption, Maximized power output

Compatibility

Compatible Engine Models

- 4JA1
- 4JB1
- JX493
