

Automobile Engine Valve

Precision-engineered valves designed for optimal performance in automobile engines. Constructed from high-quality materials for durability and resistance to wear, they contribute to efficient combustion and extended engine life.

Product Overview

High-Performance Engine Valve

These precision-engineered automobile engine valves are designed to meet original equipment quality standards, ensuring optimal combustion efficiency and engine longevity. Manufactured to exacting tolerances, they provide a reliable fit for demanding automotive applications. These components are built from high-durability materials to withstand the extreme thermal and mechanical stresses found in internal combustion environments.

Technical Specifications

Engine Compatibility	4Y Engine
Vehicle Application	Toyota Hiace, Pick-up, Forklift
