

Automobile Rear Shock Absorber

This rear shock absorber is designed for use in automobile suspension systems. The hydraulic damper absorbs shocks and vibrations to provide a smoother and more controlled ride.

Overview

Performance and Comfort

This rear shock absorber is a high-quality hydraulic damper engineered to effectively manage suspension movement and vehicle vibrations. By converting kinetic energy into heat through precise hydraulic fluid displacement, it ensures optimal stability, handling, and ride comfort for the vehicle. It serves as a critical component for maintaining a smooth and controlled driving experience on uneven road surfaces.

Compatibility

Compatible Model	Geely Free Cruiser
------------------	--------------------

Technical Details

Core Function

- Vibration damping
- Suspension stability
- Kinetic energy dissipation
- Improved ride comfort

Component Type	Hydraulic Rear Shock Absorber
----------------	-------------------------------
