

Automotive Acoustic Windshield Glass

Automotive acoustic glass is designed to reduce noise transmission, enhancing driving comfort. This windshield features a sound-dampening interlayer that minimizes external sounds, providing a quieter cabin environment.

Product Overview

Advanced Acoustic Windshield Technology

This automotive acoustic windshield is engineered to provide a superior driving experience by significantly reducing external noise transmission. Utilizing a specialized sound-dampening interlayer, the glass effectively minimizes road and wind noise without adding unnecessary weight or thickness to the vehicle. Designed to meet rigorous automotive safety standards, this windshield ensures both a quieter cabin environment and reliable structural integrity for passenger protection.

Technical Features

| | |
|----------------------------|--|
| Noise Reduction Technology | Specialized sound-dampening interlayer |
| Weight Profile | Standard weight (no increase) |
| Thickness Profile | Standard thickness |

Compliance & Safety

| | |
|------------------|--|
| Safety Standards | Automotive Safety Certified, Structural Integrity Verified |
