

Automotive Ball Bearing

This high-precision ball bearing is designed for automotive applications. It is constructed with hardened steel races and rolling elements for durability and extended lifespan.

Product Overview

High-Precision Automotive Ball Bearing

This high-precision ball bearing is engineered specifically for demanding automotive applications, offering exceptional durability and an extended service life. Constructed with hardened steel races and rolling elements, it effectively minimizes friction and wear to ensure smooth, efficient operation. The unit features a robust sealing system designed to prevent contamination and maintain consistent lubrication, making it ideal for critical components like wheel hubs and transmissions. It is built to meet or exceed OEM specifications, providing reliable performance for professional automotive maintenance and repair.

Technical Specifications

Sealing System

Robust Sealing • Contamination Resistant

Suitable Applications

- Wheel Hubs
- Transmissions
- Rotating Components

Material

Hardened Steel

Performance Standards

Operational Benefits

1 High

Friction Reduction

1 Extended
