

Automotive Brake Components Set

This collection of components is designed for automotive braking systems. The parts include a mounting bracket, caliper housing, and rotor hub.

Product Overview

High-Performance Brake Components

This automotive brake components set is engineered for durability and reliable performance in demanding vehicle braking systems. The kit includes precision-cast metal parts, such as mounting brackets, caliper housings, and rotor hubs, designed to provide essential structural support and efficient heat dissipation. Each component is built to withstand the rigors of automotive operation, ensuring safety and consistent stopping power.

Technical Details

Included Components

- Mounting bracket with cylindrical recesses
- Caliper housing with central bore
- Rotor hub with ventilation slots
