

Automotive Brake Disc Rotor

This high-quality automotive brake disc rotor is designed for optimal braking performance and durability. It is constructed from premium materials for resistance to wear and long-lasting performance.

Product Overview

High-Performance Brake Component

This automotive brake disc rotor is designed for optimal braking performance, durability, and reliable stopping power. Precision-machined to ensure smooth operation and reduced noise, it is constructed from premium materials that offer excellent heat dissipation and wear resistance. Engineered to meet or exceed strict quality standards, this component is suitable for a wide variety of vehicle applications.

Dimensions & Physical Specs

Key Dimensions

2.25 IN

Height

11.25 IN

Length/Diameter

8.8 LBS

Weight

Compatibility & Application

Supported Vehicle Types

American Cars, European Cars, Japanese Cars, Korean Cars

Product Range

Available Product Categories

- Brake Discs
- Brake Drums
- Heavy Truck Drums
- Slotted & Cross-drilled Discs
- Boat/Yacht Trailer Hubs
