

Automotive Brake Lining

This high-performance brake lining is designed for optimal braking efficiency and durability. Constructed from a durable composite material, it offers excellent heat dissipation and reduced brake fade.

Product Overview

High-Performance Drum Brake Lining

This high-performance drum brake lining is engineered for optimal braking efficiency and durability in demanding automotive applications. Specifically designed for heavy and light trucks, the lining features a robust composite friction material that ensures consistent stopping power across a wide range of operating temperatures. Precision-drilled holes are integrated into the design to facilitate superior heat dissipation and effectively reduce brake fade, ensuring reliable performance under pressure.

Technical Specifications

Quality Standard

Exceeds National Standard

Key Features

- High heat dissipation capability
- Reduced brake fade
- Durable composite material construction
- Precision-drilled mounting holes

Application

Heavy Trucks, Light Trucks
