

# Automotive Brake Lining Component

This automotive brake lining component is engineered for reliable performance. It measures 209mm in outer arc length, 203mm in width, and 15.5mm in thickness.

## Product Overview

### High-Performance Brake Lining Component

This automotive brake lining component is engineered for durability and precise fitment in heavy-duty vehicle braking systems. Designed with specific dimensions for reliable stopping power, it features a robust construction with 17 mounting holes for secure installation. This component is built to withstand rigorous operational demands, ensuring safety and consistency in automotive applications.

## Physical Dimensions

Outer Arc Length	209 mm
Width	203 mm
Thickness	15.5 mm
Side Height	182.6 mm

## Technical Specifications

### Hole Spacing Intervals

- 96
- 160
- 203

### Countersink Specifications

Metric	Value
Countersink Angle	150°
Top Diameter	15mm
Bottom Diameter	7.5mm

Number of Holes	17
