

Automotive Climate Control Unit

This automotive air conditioning control unit has a digital display, fan speed and direction controls, A/C and defrost functions, and an automatic mode. It includes a water valve actuator and a heat sink component for thermal management.

Overview

Automotive Climate Control Unit

This automotive climate control unit is designed to provide precise thermal management for vehicle cabin environments. It features an intuitive digital interface with dedicated controls for fan speed, airflow direction, A/C activation, and defrost functions. Engineered for reliability, the system includes an integrated water valve actuator and a robust heat sink to ensure consistent performance under demanding conditions.

Technical Specifications

Operating Voltage	24 V
Control Features	Digital Display, Fan Speed Control, Airflow Direction, A/C Function, Defrost Function, Automatic Mode

Components

Included Components

- Digital Control Interface
- Water Valve Actuator
- Thermal Heat Sink
