

# Automotive Clutch Disc with Sprung Hub

High-performance clutch disc designed for automotive applications. It features a durable friction material for enhanced grip and extended lifespan, along with a sprung hub for vibration damping and smooth engagement.

## Product Overview

### High-Performance Automotive Clutch Disc

This automotive clutch disc is engineered for demanding applications, featuring a sprung hub design that effectively dampens vibrations for smoother engagement. Constructed with durable, heat-treated friction materials, it is built to withstand high stress and resist premature wear. Precision manufacturing ensures optimal performance and reliability across a variety of vehicle models.

## Performance Features

### Key Advantages

- Enhanced grip for high performance
- Extended operational lifespan
- Smooth engagement via sprung hub
- Increased resistance to wear

Damping System	Sprung Hub
Construction Details	Heat-treated components, High-grip friction material

## Compatibility

### Application

Automotive
