

Automotive Clutch Pressure Plate Assembly

This clutch pressure plate assembly is designed for automotive applications. It is a critical component in the clutch system, responsible for applying pressure to the clutch disc to engage and disengage the engine from the transmission.

Product Overview

Automotive Clutch Pressure Plate Assembly

This automotive clutch pressure plate assembly is a critical component engineered for manual transmission systems. Designed for durability and efficient power transfer, the assembly features a robust cast metal construction with precise radial slots for reliable engagement with the clutch disc. It ensures smooth operation by effectively applying pressure to the clutch disc to engage and disengage the engine from the transmission.

Technical Specifications

Product Code	X0006
Application	Manual Transmission Systems
Material	Cast Metal
Key Features	Circular Design, High-Durability, Radial Fingers, Multi-Point Mounting
