Product Overview

Automotive Combination Switch Assembly

This automotive combination switch assembly is designed for reliable control of vehicle lighting and signaling systems. The unit features an integrated lever mechanism, a robust wiring harness, and multiple electrical connectors to ensure seamless integration with the vehicle's existing electrical infrastructure. Built for durability, it includes protective cable sleeves to safeguard internal wiring against wear and environmental factors.

Technical Details

Part Number (YNK)	81.22509.0124
Part Number (Secondary)	14.09.0124
Control Functions	Turn Signal, Headlight Control, Lighting System Management

Construction

Assembly Features

- Integrated lever-operated switch
- Multi-colored wiring harness
- Protective cable sleeving
- Multiple electrical interface connectors
