

Automotive Component Straightening Machine

This straightening machine improves efficiency through servo and transmission technology. It achieves high correcting precision, reaching up to 0.01mm.

Product Overview

Precision Straightening Solution

This high-performance straightening machine is engineered specifically for the automotive industry, delivering reliable and precise metal component correction. Designed for high-volume production environments, it features a robust frame construction and an advanced hydraulic system to ensure consistent dimensional accuracy and structural integrity. Its modular design allows for seamless integration into existing manufacturing lines, while built-in safety features prioritize operator protection.

Technical Specifications

Force Capacity Range

1000 KN

Minimum Force

2500 KN

Maximum Force

Primary Industry

Automotive

Key Features

Core Capabilities

- High-precision metal forming
- Robust frame construction
- Advanced hydraulic system
- Modular design for integration
- Safety-focused operation

Operational Features

User-friendly controls • High-volume compatible • Modular architecture
