

Automotive Cooling System Flush

Cooling system flush eliminates rust and scale from automotive cooling systems. The formula contains additives that protect metal surfaces, prevent overheating, and improve cooling efficiency; it is compatible with all antifreeze types and suitable for cars, trucks, and SUVs.

Product Overview

Comprehensive Cooling System Maintenance

This advanced cooling system flush is engineered to effectively remove harmful rust, scale, and deposits that accumulate within automotive cooling systems. By restoring proper flow and thermal efficiency, it actively prevents overheating and helps maintain optimal engine performance. The formula incorporates specialized anti-corrosion and anti-rust additives to safeguard delicate internal metal surfaces and prevent long-term component degradation.

Technical Specifications

Key Functional Benefits

- Removes rust and scale deposits
- Prevents leakage and system blockages
- Contains anti-corrosion additives
- Contains anti-rust inhibitors
- Improves overall cooling system efficiency

Net Content	354 ml
Antifreeze Compatibility	All types of antifreeze

Application

Compatible Vehicles

Cars • Trucks • SUVs
