

Automotive Engine Crankshaft

High-performance crankshaft designed for automotive engines. It features a balanced rotating assembly, forged construction, and optimized oiling system.

Product Overview

High-Performance Automotive Crankshaft

This high-performance crankshaft is precision-engineered to deliver optimal strength and durability for demanding automotive engines. Built with a forged construction, it features a balanced rotating assembly and an optimized oiling system. It is specifically designed to meet the rigorous requirements of racing and high-performance applications.

Technical Specifications

Part Identifiers

- ERMAN
- L1605474598
- 1215E

Construction	Forged
Suitable Applications	Racing, High-Performance

Key Features

Core Features

Balanced Rotating Assembly • Optimized Oiling System • Precision Engineered
