

Automotive Engine Water Pump

This water pump is a high-quality automotive component designed for efficient engine cooling. The pump circulates coolant throughout the engine to maintain optimal operating temperatures and prevent overheating.

Product Overview

High-Performance Engine Cooling

The GWT-96A water pump is a precision-engineered automotive component designed to maintain optimal engine temperatures by efficiently circulating coolant through the engine block, radiator, and hoses. Built with durable materials, this pump features a robust impeller and high-quality bearings to ensure smooth, quiet operation and long-lasting reliability. It serves as a direct replacement for specified vehicle models, offering a dependable solution for engine health and overheating prevention.

Technical Details

Model Number	GWT-96A
Component Type	Automotive Engine Water Pump
Production Batch/Reference	TH20190105

Features

Key Features

- Precision-engineered impeller
- Robust bearings for quiet operation
- Durable construction
- Direct replacement design
