

Automotive Gear Set

This gear set is designed for automotive transmission systems. The metallic gears are engineered for efficient power transfer and durability.

Product Overview

Automotive Transmission Components

This automotive gear set is engineered for reliable power transfer within steering and transmission systems. Designed for standard shaft mounting, these metallic components offer consistent performance for vehicular drivetrain applications. The assembly is built to withstand mechanical stress, making it an essential replacement part for heavy-duty automotive maintenance.

Technical Specifications

Primary Application

- Automotive Transmission
- Steering System Maintenance

Component Type	Steering and Transmission Gear Set
Mounting Configuration	Shaft-mounted central bore
Material Composition	Industrial Grade Metal, Durable Alloy
