Product Overview

High-Efficiency Automotive Heater Core

This automotive heater core is engineered for optimal heat transfer and reliable cabin climate control. Featuring a robust, high-density fin and tube construction, it is designed to withstand the demanding conditions of automotive cooling systems, including constant exposure to coolant and significant temperature fluctuations. Its compact design ensures precise fitment and ease of installation, making it a dependable choice for maintaining interior comfort.

Technical Specifications

Core Dimensions

Key Features

Design Highlights

- High-density fin and tube construction
- Optimized for maximum heat dissipation
- Durable materials for coolant resistance
- Compact design for easy installation
