

Automotive HVAC Control Panel

This automotive HVAC control panel is designed for climate control systems. It allows users to adjust temperature, fan speed, and air distribution within the vehicle.

Product Overview

Automotive HVAC Control Module

This automotive HVAC control panel is designed for precise climate management within vehicle cabins. Featuring a tactile, user-friendly interface, it allows drivers to easily adjust temperature, airflow intensity, and distribution patterns. The robust design ensures reliable performance and intuitive operation for various driving conditions.

Interface & Controls

Available Adjustments

- Temperature Control (Hot/Cold)
- Fan Speed Adjustment
- Air Distribution/Vent Configuration
- Air Recirculation

Distribution Modes

Defrost • Ventilation

Control Method

Rotary Knobs, Slider

Operational Metrics

Recirculation Type

Manual Slider
