

# Automotive HVAC Heater Core

This heater core is designed for efficient heat transfer in automotive heating systems. It is constructed with durable materials for long-lasting reliability and resistance to corrosion.

## ADDITIONAL IMAGES

## Product Overview

### High-Performance Heater Core

This automotive HVAC heater core is engineered for efficient heat transfer and reliable performance in demanding driving conditions. Constructed with durable materials, it offers excellent thermal conductivity and corrosion resistance for a long service life. Its compact design ensures optimal airflow and seamless compatibility with specific vehicle models, meeting or exceeding OEM standards for fit and function.

## Technical Specifications

### Core Dimensions

**134 mm**

Width

**229 mm**

Height

**18 mm**

Depth

### Compatibility & OEM

| Attribute          | Value   |
|--------------------|---------|
| NISSENS Reference  | 6275112 |
| Make Compatibility | TOYOTA  |

## Key Features

|              |  |
|--------------|--|
| Construction | Aluminum Fins, Aluminum Tubes, Corrosion Resistant, Compact Design |
