

Automotive Instrument Cluster Programmer

This universal dash programmer is designed for automotive electronics applications. It allows programming and recalibration of instrument clusters in various vehicle models.

Product Overview

Professional Odometer Programming System

The Tacho Universal is a premium programming device designed for worldwide use on digital speedometers. It offers high flexibility and operational comfort, enabling users to decode and display current odometer readings on an easy-to-read backlit LCD. The system supports complex tasks such as editing, saving, and loading datasets, with the ability to archive up to 200 files on a PC.

Key Features

System Capabilities

- Decodes and displays current odometer readings
- Backlit display for poor lighting conditions
- Menu-guided operation
- PC connectivity for data archiving
- Supports storage of up to 200 datasets
- Ideal for speedometer repair and diagnostics

Package Contents

Included Components

Component Category	Quantity/Included
Hand-held programming device	Included
Vehicle-specific Cables	Over 40 types included (BMW, MB, Audi, VW, etc.)
EEPROM & NEC Dongles	Included
BMW Key Reader PRO	Included
User Manual	PDF/DVD

Technical Specifications

Internal Storage

200 files

Max Datasets
