

Automotive LED Tail Light Assembly

This high-performance LED tail light assembly is designed for automotive applications. It features red and white LEDs for brake, tail, and reverse light functions, encased in a durable housing.

Overview

High-Performance Automotive Lighting

This LED tail light assembly is engineered for superior automotive visibility and safety. Featuring a robust combination of red and white LEDs, it provides distinct, reliable signaling for brake, tail, and reverse light functions. The durable housing is designed to withstand harsh road conditions, offering a long-lasting and energy-efficient lighting solution for modern vehicles.

Technical Specifications

LED Configuration

- Red LEDs for Brake and Tail functions
- White LEDs for Reverse function

Light Source	LED
Lighting Functions	Brake Light, Tail Light, Reverse Light

Construction & Durability

Key Benefits

Enhanced Visibility • Low Power Consumption • Long Lifespan • Weather Resistant

Housing Materials	Clear and Black durable housing
